ALLPLAN
A NEMETSCHEK COMPANY

SYSTEM REQUIREMENTS
ALLPLAN COWORK*

HARDWARE/SOFTWARE-REQUIREMENTS

NETWORK

- An internet connection that is stable and uninterrupted.
- **Minimum requirements:** 10 Mbit/s for upload; 20 Mbit/s for download, the latency must be less than 50 milliseconds (you can check this by means of Allplan Performance Diagnostics, for example).
- **Recommended:** 50 Mbit/s for upload; 100 Mbit/s for download, the latency must be less than 10 milliseconds (you can check this by means of Allplan Performance Diagnostics, for example).
- Current network drivers
- Network connections based on LAN (better than WLAN)

LOCAL FILE STORAGE FOLDER

- If possible, use a local (SSD) hard drive for the local file storage folder; network drives slow down access. The local file storage folder must not be shared between several users; this might cause massive problems. The Services window shows the path of the local file storage folder.
- You can find information on how to change the path of the local file storage folder in a FAQ on Allplan Connect; for example, enter the following search term: "local file storage folder Allplan Cowork".

HARDWARE

- The hardware requirements are the same as those for Allplan.

FURTHER REQUIREMENTS

- You have an Allplan Bimplus/Allplan Connect/Allplan Campus account
- An Allplan Bimplus team is available
- To create Allplan Cowork projects, you have to be the team owner or team administrator of the Allplan Bimplus team
- You have one or more Allplan Cowork licenses
