PERFORMANCE HIGHLIGHTS
ALLPLAN SHARE

The combination of Allplan Share and Allplan Architecture or Allplan Engineering as well as an Allplan Bimplus account makes it possible to work together with planning partners around the world directly on one and the same Allplan project. Allplan Share is based on the BIM platform Allplan Bimplus and offers you additional functions, such as the Model Viewer, the task management tool: Task Board or audit control and much more. With Allplan Share, you can reduce your administrative and personnel costs. Additional costs for procurement, installation and maintenance of a local server are eliminated, since the data is stored in the Allplan Bimplus cloud.

CONVENIENT USE

Allplan Share takes care of the central organization of CAD and layout workstations and creates clear coordination benefits in planning and design offices. Work is thus as easy as at a normal single user workstation. In addition to the data and project availability in the Allplan Bimplus cloud, the central user and project management is a key advantage.

EDIT PROJECTS AT THE SAME TIME

Allplan Share makes it possible for several users to simultaneously access a project, even if they are not part of the same local area network (LAN). Local networks can thus be expanded to include individual work stations in this way. The data transfer between the locations occurs via the Allplan Bimplus cloud. Allplan Share makes it possible to link several local and external work stations with each other. All participants access the same data state of the project in the process. This optimally supports flexible office structures.

GUARANTEED DATA INTEGRITY

Within an Allplan version, it is ensured that all Allplan data is identical down to the last detail and no information gets lost. Allplan Share works with the original Allplan data so that a loss of information is avoided.

AUTOMATIC SYNCHRONIZATION

Select Allplan data is automatically transferred into the BIM coordination model of Allplan Bimplus and can be processed further there. The models in Allplan and in the BIM coordination model of Allplan Bimplus are also always synchronous.

CLEARLY REGULATED ACCESS RIGHTS

Roles and access rights are clearly regulated for all project participants through the central user and project administration of Allplan Bimplus. This ensures that only authorized users can manage, change or view projects.

RELIABLE DATA PROTECTION

The security of your data is our top priority. That is why we at Allplan Share place particular value on comprehensive protection. The data transmission is secured against unauthorized access by means of encryption.
